## INSTALLATION TERMS AND CONDITIONS

### Terms and Conditions

#### Exclusions:

- **Connection to Council Grid:** The customer bears the responsibility for applying and obtaining any necessary permits or approvals from their local council for connecting the system to the grid (e.g., SSEG application).
- **Extended Cable Length:** Additional cable costs will be incurred if the installation requires cable runs exceeding 10 meters from the distribution board (DB).
- **Major Circuit Separation:** This package does not include major circuit separation work. Please inquire for a separate quote if needed.
- **Excavation and Groundwork:** We do not cover excavation, backfill, or surface replacement work in this package. Please inquire for separate quotes if required.

#### Additional Costs for Increased Solar Capacity:

- **Lightning Protection:** A risk assessment and potential lightning protection system installation will be quoted based on your specific location and needs.
- **Roof Certification:** If required, a Roof A19 certificate from a qualified roofing engineer can be arranged at an additional cost.
- **Wind Load Considerations:** Your roof must be able to withstand wind loads of at least 25m/s. If reinforcement is needed, it will be quoted separately.
- **Multiple Azimuths:** The design process will address the potential need for panels facing different directions, which may incur additional costs.
- **Thatch Roofs:** This package excludes installations on thatched roofs. Please inquire for alternative options.
- **Extended DC Runs:** DC cable runs are limited to 25 meters within the same building. Trenching for separate buildings requires a separate quote.
- **Panel Mounting System:** The mounting system type (tile, clip lock, corrugated, etc.) will depend on your roof and may incur additional charges.
- **Special Roof Types:** Slate, quarry tile, and other specialized roof types require separate costing and may not be compatible with this package.

## INSTALLATION TERMS AND CONDITIONS

### Important Installation Requirements:

- Valid Certificate of Compliance (CoC): You must possess a current and valid CoC for your electrical system. We will issue a supplementary CoC after installation. If your CoC is outdated or unavailable, we can provide a quote for obtaining a new one (chargeable to the customer).
- Suitable Installation Location: The system cannot be installed in areas deemed unsuitable due to heat, dust, or other code violations (e.g., bathrooms).
- Wall Load Capacity: Electrical components must be mounted on walls capable of supporting the weight (drywall and wooden walls are not suitable).
- Reliable Wi-Fi: Strong and readily available Wi-Fi is required at the installation point for system monitoring. We do not provide Wi-Fi extenders.
- Professional Installation: Only authorized LopileTech installers can perform the installation. Self-installation is strictly prohibited.
